

LAB OBSERVATION

EXPERIMENT-4

Implement a finite-state machine for morphological parsing. In this example, we'll create a simple machine to generate plural forms of English nouns using python.

CODE:

```
1 word = input("Enter a noun: ")
2
3 if word.endswith("y"):
4     plural = word[:-1] + "ies"
5 else:
6     plural = word + "s"
7
8 print("Plural Form:", plural)
```

OUTPUT:

```
... Enter a noun: city
    Plural Form: cities
```
