

LAB OBSERVATION

EXPERIMENT-8

Implement a simple stochastic part-of-speech tagging algorithm using a basic probabilistic model to assign POS tags using python.

CODE:

```
1 tags = {  
2     "I": "PRP",  
3     "eat": "VB",  
4     "apple": "NN",  
5     "is": "VBZ",  
6     "good": "JJ"  
7 }  
8  
9 word = input("Enter a word: ")  
10  
11 print("POS Tag:", tags.get(word, "Unknown"))
```

OUTPUT:

```
... Enter a word: apple  
    POS Tag: NN
```
