

LAB OBSERVATION

EXPERIMENT-13

Generate a parse tree for a given sentence using a context-free grammar using python program.

CODE:

```
[3] 1 import nltk
    2 from nltk import CFG
    3 from nltk.parse import ChartParser
    4
    5 grammar = CFG.fromstring("""
    6 S -> NP VP
    7 NP -> 'cat'
    8 VP -> V
    9 V -> 'runs'
   10 """)
   11
   12 parser = ChartParser(grammar)
   13
   14 sentence = input("Enter sentence: ").split()
   15
   16 for tree in parser.parse(sentence):
   17     print(tree)
```

OUTPUT:

```
Enter sentence: cat runs
(S (NP cat) (VP (V runs)))
```
