

LAB OBSERVATION

EXPERIMENT-2

Implement a basic finite state automaton that recognizes a specific language or pattern. In this example, we'll create a simple automaton to match strings ending with 'ab' using python.

CODE:

```
1 string = input("Enter a string: ")
2
3 if string.endswith("ab"):
4     print("Accepted")
5 else:
6     print("Rejected")
```

OUTPUT:

```
... Enter a string: xyzaab
Accepted
```
